

# GENETICS

## Can we Really Blame it all on Our Genes?

Lecture 2:  
How is Genetics Important for your Health?

Thursday, May 5<sup>th</sup>, 2016  
Medical Science Building 150  
Jane Gair, Ph. D.

An Introduction to Genetics (Lecture 1)

# CONTINUATION FROM LAST WEEK

## ❖ EPIGENETICS

- ❖ Study of cellular and physiological phenotypic variation in the lifespan
- ❖ Modification to genes through alteration in histone elements by proteins

## An Introduction to Genetics (Lecture 1)

### Epigenetics- Video

<https://www.youtube.com/watch?v=AvB0q3mg4sQ>

## ❖ APPLICATION OF GENETICS

### ❖ GENOMICS

- ❖ Analyzes genome sequences to study structure, function, and evolution of genes and genomes

### ❖ PROTEOMICS

- ❖ Identifies proteins present in cells in certain conditions and studies post-translational modifications, locations and their interactions

### ❖ BIOINFORMATICS

- ❖ Stores, retrieves, and analyzes data generated by genomics and proteomics

## An Introduction to Genetics (Lecture 1)

### ❖ BIOTECHNOLOGY

- ❖ Genetic modification of crop plants for:
  - ❖ Increasing herbicide, insect and viral resistance
  - ❖ Nutritional enhancement

**TABLE 1.1**

**Some Genetically Altered Traits in Crop Plants**

- Herbicide Resistance**  
Corn, soybeans, rice, cotton, sugarbeets, canola
- Insect Resistance**  
Corn, cotton, potato
- Virus Resistance**  
Potato, yellow squash, papaya
- Nutritional Enhancement**  
Golden rice
- Altered Oil Content**  
Soybeans, canola
- Delayed Ripening**  
Tomato

# THE HUMAN GENOME - THE BLUEPRINT OF LIFE

The Human Genome project sequenced DNA, the molecules that make up chromosomes in cells. The information derived from this project presented scientists with a valuable opportunity to not only uncover the secrets of DNA but also the manner in which genes are associated with disease. Scientists now are able to compare the genomes of people who have a certain condition with those who do not, in order to determine whether genetic variation plays a role in that condition. This information will help them to predict and possibly prevent disease in the future.

## 1. Cell

Each of the trillions of cells in the human body contains 46 chromosomes packed tightly into the region called the nucleus.

## 2. Chromosomes

Half of the chromosomes in the nucleus come from your mother, and half from your father. Each chromosome is a long, tightly coiled molecule called DNA, or deoxyribonucleic acid.

## 3. DNA

If unwound, the DNA from all the chromosomes in a single cell placed end to end would stretch more than six feet.

## 4. Genome

DNA is made up of chemical building blocks abbreviated A, C, T, and G. The entire length of a DNA strand consists of these four blocks in different combinations. Together, all the DNA in all the chromosomes – more than 3 billion letters – makes up the human genome. When scientists say they have “sequenced” the human genome, they mean that they have figured out the order of all those A's, C's, T's, and G's in sequence.

G A T C  
C T A G G A C C C T C T T T O  
G A G A G A G

## 6. Misspellings in the Sequence

The way the genes are “spelled” makes all the difference – one letter out of place in a gene can cause disease. Now that we know the normal sequence of the human genome, researchers can compare the DNA sequence from people who have a disease or condition to those who don't. If there are differences in the spelling of certain genes between the two groups, it's possible that the condition may be caused by or related to that misspelling in that gene.

G A G A G A G  
C T A G G A C A C C T C T T C

## 5. Genes: 30,000 DNA Segments

Much of the DNA in the genome is organized into units called genes. There may be as many as 30,000 genes in the genome; they are the instruction manual for making all the proteins in the body. These proteins are the physical “stuff” that makes up our hair, skin, heart, and blood, among other things. They also control chemical reactions, regulate blood sugar and heart rate, and control how food or medicine is metabolized in the body.

## 7. Genes and Disease

Scientists have identified about 6000 diseases, such as Huntington disease and cystic fibrosis, that are directly caused by misspellings or physical problems in single genes. But the genetic contribution to many common conditions – such as diabetes and heart disease – is part of a larger puzzle that could include diet, lifestyle, environment, and even other genes. For many of these common conditions, genetic misspellings probably make only a small contribution to disease relative to other factors, or work in concert with them to cause illness.

## GENETICS: Can we Really Blame it all on Our Genes? Series Overview

### ❖ SUMMARY

- ❖ Genetics is a very broad field relating to every living being on earth
- ❖ Provides guidelines that aid in determining the makeup of an individual
- ❖ Differentiation in genes, chromosomes, and other genetic elements all contribute to creating a unique organism
- ❖ Genetics is not only useful in natural settings but can also be manipulated to serve certain needs, as seen in agriculture

# QUESTIONS?

THE UNIVERSITY OF BRITISH COLUMBIA

**Faculty of Medicine**

**University  
of Victoria**

## GENETICS: Can we Really Blame it all on Our Genes? Series Overview

- ❖ **WEEK 1 (April 28<sup>th</sup>, 2016):**  
Introduction to Genetics
- ❖ **WEEK 2 (May 5<sup>th</sup>, 2016):**  
**How is Genetics Important for your Health?**
- ❖ **WEEK 3 (May 12<sup>th</sup>, 2016):**  
Understanding the Genetics of some Common Diseases and Disorders
- ❖ **WEEK 4 (May 19<sup>th</sup>, 2016):**  
How Medicine can work with your Genetics to Improve your Care

## OVERVIEW: How is Genetics Important for your Health? (Lecture 2)

- ❖ Summary from last week
- ❖ Genes, gene mutations, causes of mutations and onset of disease.
- ❖ Description of Pedigrees
- ❖ Family trees and how some diseases run in families
- ❖ Importance of Family History taking in medicine
- ❖ Impact of diet, exercise and lifestyle choices (e.g. Smoking) on genes, aging and overall health

## How is Genetics Important for your Health? (Lecture 2)

Recap from last week- An Introduction to Genetics- Video  
<https://www.youtube.com/watch?v=bVk0twJYL6Y>

## How is Genetics Important for your Health? (Lecture 2)

### ❖ GENES

- ❖ Fundamental units of genetic material/ information
- ❖ DNA represents the sequence coding a polypeptide
- ❖ ~ 20,000-25,000 human protein-coding genes

## How is Genetics Important for your Health? (Lecture 2)

### ❖ **MUTATIONS**

- ❖ **Permanent alteration of the nucleotide sequence of the genome**
- ❖ **Results from damage to DNA that is not repaired**
  - ❖ **Errors in replication process**
  - ❖ **Insertion/deletion of segments of DNA**
- ❖ **May or may not produce observable changes in the phenotype of an organism**

## How is Genetics Important for your Health? (Lecture 2)

- ❖ **Two types of mutations**
  - ❖ **GENE MUTATIONS**
    - ❖ **Changes in a single gene**
  - ❖ **CHROMOSOMAL MUTATIONS**
    - ❖ **Changes in whole chromosomes**
- ❖ **GERM MUTATIONS**
  - ❖ **Effect reproduction, heritable**
- ❖ **SOMATIC MUTATIONS**
  - ❖ **Effect the body (NOT heritable)**

## How is Genetics Important for your Health? (Lecture 2)

### ❖ POINT MUTATIONS

#### ❖ SUBSTITUTIONS

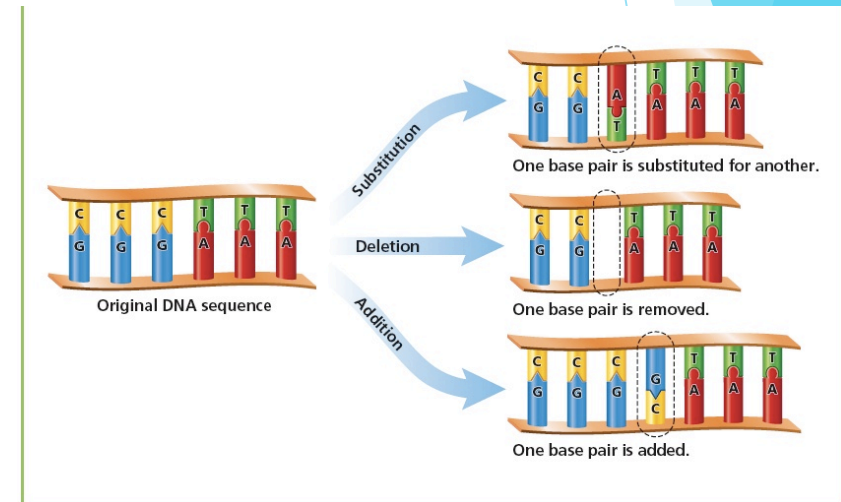

- ❖ One base is changed to a different base

#### ❖ INSERTION

- ❖ One base is inserted from the DNA sequence

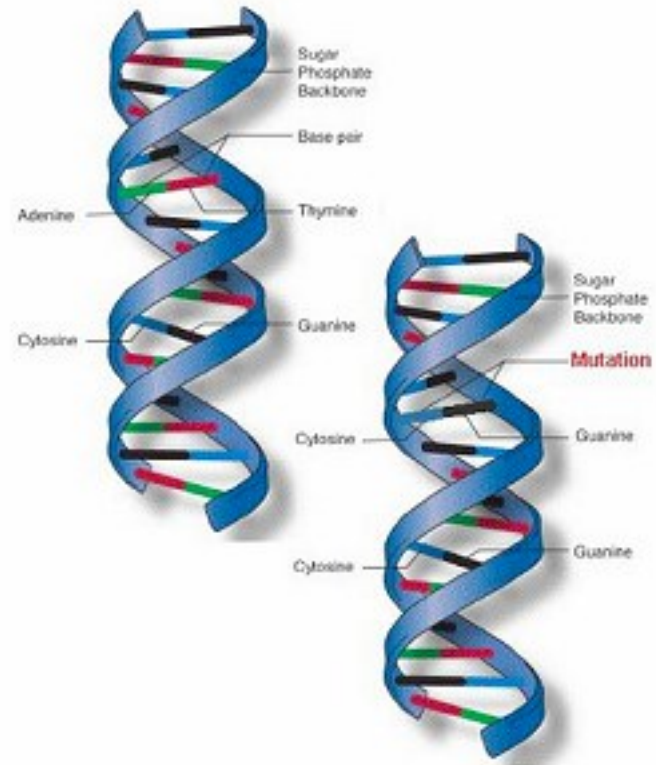

#### ❖ DELETION

- ❖ One base is removed from the DNA sequence

# GENE MUTATIONS

How is Genetics Important for your Health? (Lecture 2)

An Introduction to Genetic Mutations - Video (5 mins)

<https://www.youtube.com/watch?v=g02RnGXCXrQ>

## How is Genetics Important for your Health? (Lecture 2)

### ❖ SOURCES OF MUTATIONS

#### ❖ ENVIRONMENTAL FACTORS

- ❖ Sunlight
- ❖ Radiation
- ❖ Smoking

#### ❖ ENDOGENOUS FACTORS

- ❖ Errors in replication
- ❖ Toxic bi-products from cellular metabolism

## How is Genetics Important for your Health? (Lecture 2)

### ❖ Not all mutations are bad...

❖ Mutations are the main driving factor for **EVOLUTION**

❖ **RESISTANCE** to pathogens

❖ **TOLERANCE** to cold

❖ Need little **SLEEP** (mutation in **DEC2** gene)

❖ Super-**DENSE** bones

❖ Crystal- Clear underwater **VISION**

How is Genetics Important for your Health? (Lecture 2)

❖ **SUSCEPTIBILITY TO DISEASE**

❖ easily affected, influenced, or harmed by something

❖ **IMMUNITY**

❖ Balanced state of adequate biological defenses to fight disease, while having adequate tolerance to avoid allergy and autoimmune disease

## How is Genetics Important for your Health? (Lecture 2)

### ❖ Disorders Caused by Individual Genes

#### ❖ Sickle Cell Disease

- ❖ Severe hereditary form of anemia

#### ❖ Cystic Fibrosis

- ❖ Affects exocrine glands

- ❖ Causes production of abnormally thick mucus

- ❖ Blocks pancreatic ducts, intestines, and bronchi

- ❖ Results in respiratory infection

How is Genetics Important for your Health? (Lecture 2)

❖ **Disorders Caused by Individual Genes (Cont'd)**

❖ **Huntington Disease**

❖ **Progressive brain disorder that causes uncontrolled movements, emotional problems and loss of cognition**

❖ **Caused by CAG repeats**

❖ **Hemophilia**

❖ **Group of hereditary genetic disorders that impair body's ability to control blood clotting**

❖ **Hemophilia A is the most common form**

## How is Genetics Important for your Health? (Lecture 2)

Five Amazing Genetic Human Mutations- Video (5 mins)

<https://www.youtube.com/watch?v=kSqXjqIclAI>

## How is Genetics Important for your Health? (Lecture 2)

### ❖ Pedigree

- ❖ Document to record ancestry

- ❖ Used by doctors (genealogists) to study family lines

  - ❖ Ancestry chart

- ❖ Selective breeding of animals

  - ❖ Breed registry

## How is Genetics Important for your Health? (Lecture 2)

### ❖ Pedigrees and Family trees

- ❖ Analysis used to determine the pattern of inheritance of traits in humans

### ❖ Mode of inheritance in humans

- ❖ Autosomal Recessive

- ❖ Autosomal Dominant

- ❖ X-linked Recessive

- ❖ X-linked Dominant

- ❖ Sex-influenced and sex-limited autosomal traits

- ❖ Mitochondrial inheritance

## How is Genetics Important for your Health? (Lecture 2)

- ❖ **Autosomal Recessive inheritance**
  - ❖ **Traits not expressed in heterozygotes**
  - ❖ **Often skip a generation**
  - ❖ **Equal proportion of males and females affected**
  - ❖ **Rare traits often found in consanguineous marriage (union between related individuals)**
  - ❖ **CYSTIC FIBROSIS, SICKLE-CELL ANEMIA are examples of autosomal recessive diseases**

# Autosomal recessive inheritance

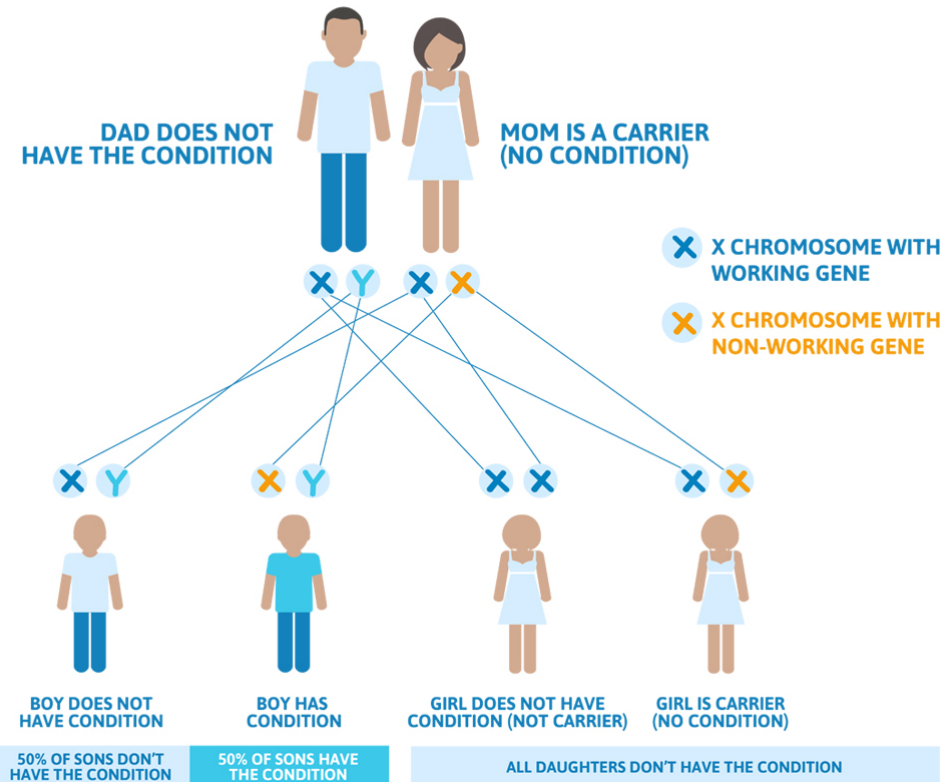

- Unaffected
- Affected
- Carrier

## How is Genetics Important for your Health? (Lecture 2)

X-linked Recessive - Video (3:41 mins)

<https://www.youtube.com/watch?v=Vdam8pKhRNo>

### X-Linked Recessive Inheritance Mother is a Carrier of the Condition

## How is Genetics Important for your Health? (Lecture 2)

### ❖ SEX-INFLUENCED TRAITS

- ❖ Autosomal traits (not carried on sex chromosomes) that are influenced by sex
- ❖ Males require one recessive allele while females need two recessive alleles to show the same trait
- ❖ Example: Baldness

Genotype	Female	Male
$B^+ B^+$	Bald	Bald
$B^+ B^-$	Full hair	Bald
$B^- B^-$	Full hair	Full hair

How is Genetics Important for your Health? (Lecture 2)

❖ **SEX LIMITED TRAITS**

❖ **Autosomal trait**

❖ **Trait that is expressed in one of the sexes**

❖ **Examples:**

❖ **Beard growth**

❖ **Milk production**

❖ **Plumage patterns in male and female birds**

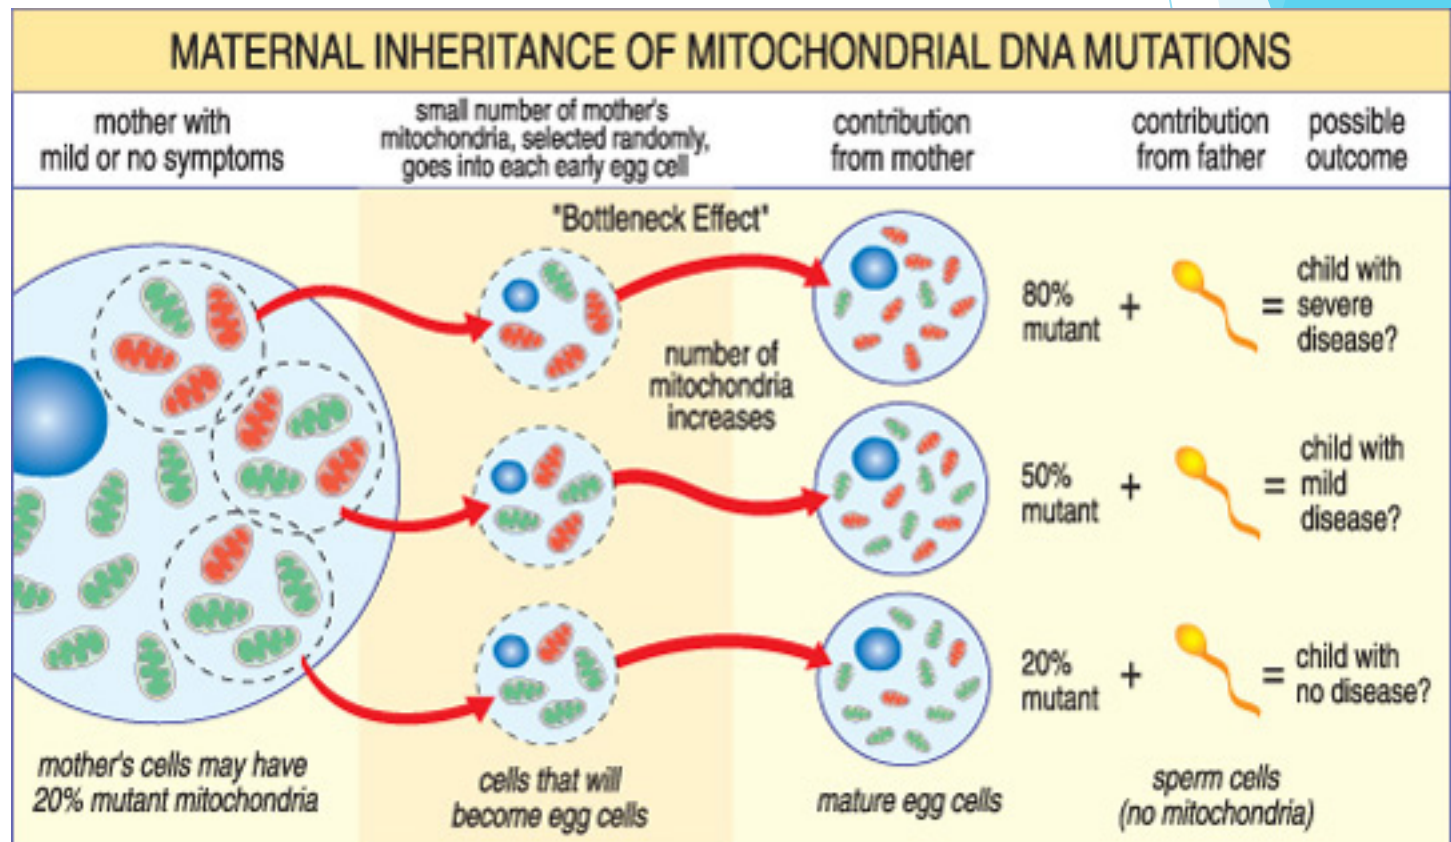

## How is Genetics Important for your Health? (Lecture 2)

### ❖ Mitochondrial Inheritance

#### ❖ Autosomal Recessive Inheritance

#### ❖ Nuclear DNA in mitochondria inherited from both parents

### ❖ Passed on if BOTH mother and father are carriers

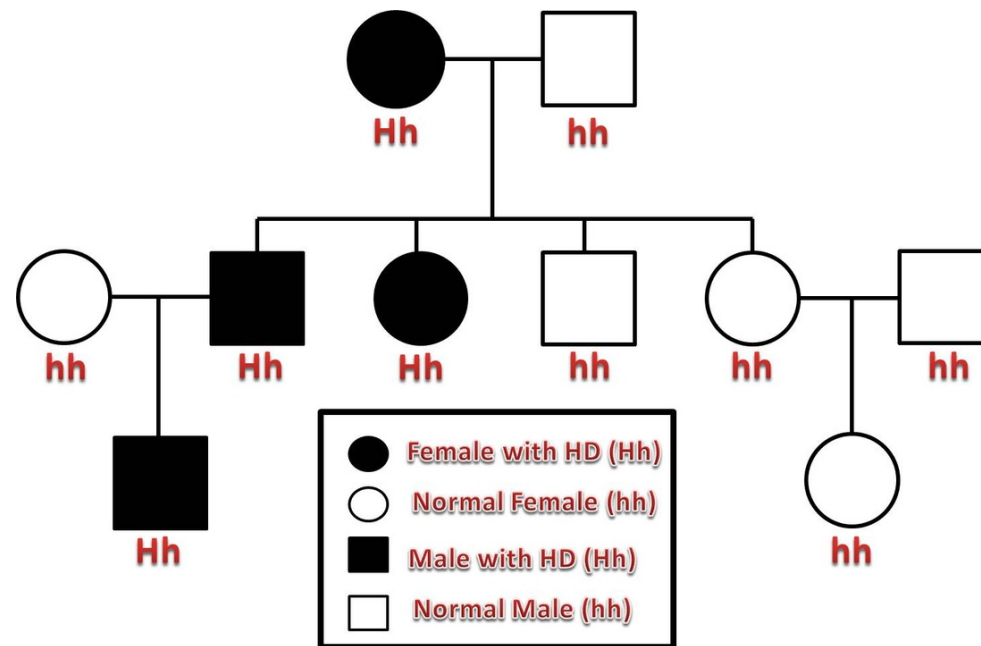

How is Genetics Important for your Health? (Lecture 2)

HUNTINGTON DISEASE - Video (2:10 mins)

<https://www.youtube.com/watch?v=JL9Y3P870jU>

**PEDIGREE:**

How is Genetics Important for your Health? (Lecture 2)

## Huntington Disease (Continued)

- ❖ Results from a dominant mutation
- ❖ All heterozygotes develop the neurological disease (50% Probability Risk)
- ❖ Affects patients in their middle age
- ❖ Offspring have 50% probability of inheriting disease allele
- ❖ Block of huntingtin cleavage by caspase IX will treat Huntington disease (cleaved peptides are highly neurotoxic)

How is Genetics Important for your Health? (Lecture 2)

## Inheritance of Zika Virus- Present day disease concerns

- ❖ Heritability of Zika virus not fully understood yet
- ❖ Known to cause disruptions in fetal development
- ❖ Instances of Microcephaly reported
- ❖ Zika Virus: Risk higher than first thought (Video from May 2<sup>nd</sup>, 2016)  
<http://www.bbc.com/news/world-latin-america-36184799>

How is Genetics Important for your Health? (Lecture 2)

## ❖ Importance of Family Medical History Records

- ❖ Powerful screening tool

- ❖ Allows for faster diagnosis of genetic diseases

- ❖ Should be updated each visit

- ❖ Family History for Prenatal Providers

  - ❖ Address family history

  - ❖ Improved health for female patient, fetus and family

- ❖ Helps investigate genetic predisposing factors that are associated with the health of the individual

How is Genetics Important for your Health? (Lecture 2)

## ❖ Importance of Family Medical History Records

❖ Should include at least three generations

❖ Questions include:

1. General information (names and birthdates)
2. Family's origin or racial/ethnic background
3. Health Status
4. Age at death and cause of death of each member
5. Pregnancy outcomes of the patient and relatives

❖ Formation of Pedigrees to analyze possible risk factors (certain characteristics of the individual that ↑ likelihood of disease)

# How is Risk Calculated?

Risk is easy to calculate for rare disorders caused by a single gene.

## Simple Disease

Single Disease Gene

## Complex Disease

Many Disease Genes

But for complex diseases that are influenced by multiple genes, risk is much more difficult to calculate.

## Complex Disease Family Pedigree

Risk must be estimated based on observation of data collected from large families affected by these diseases.

## How is Genetics Important for your Health? (Lecture 2)

- ❖ Record-keeping strategies are becoming more advanced

- ❖ 23andMe project reports genetic health, traits and ancestry for individuals for less than \$300 CAD

- ❖ The Genographic project by National Geographic is tracing human history

- ❖ [VIDEO](#)

- ❖ <https://www.youtube.com/watch?v=MdTCj9tC1Pw>

How is Genetics Important for your Health? (Lecture 2)

❖ **Diseases are not only caused by genetics**

❖ **DIET can alter predisposition to impair health**

❖ Provides nutrients that the body requires

❖ Lack of well-nourishing diet leads to increased risk from chronic disease

❖ **EXERCISE**

❖ Works synergistically with poor diet

❖ Sedentary lifestyle in combination with diet and high stress are the main causes for obesity and type 2 diabetes in North America

# Medical Complications of Obesity

How is Genetics Important for your Health? (Lecture 2)

## ❖ LIFESTYLE CHOICES

- ❖ Proper diet and exercise are crucial for good health, but other factors also influence health
- ❖ Introducing substances into your system can drastically impact health
  - ❖ Smoking ↑ risk of many fatal diseases
  - ❖ LACK OF SLEEP can lead to obesity, diabetes, heart disease and hypertension

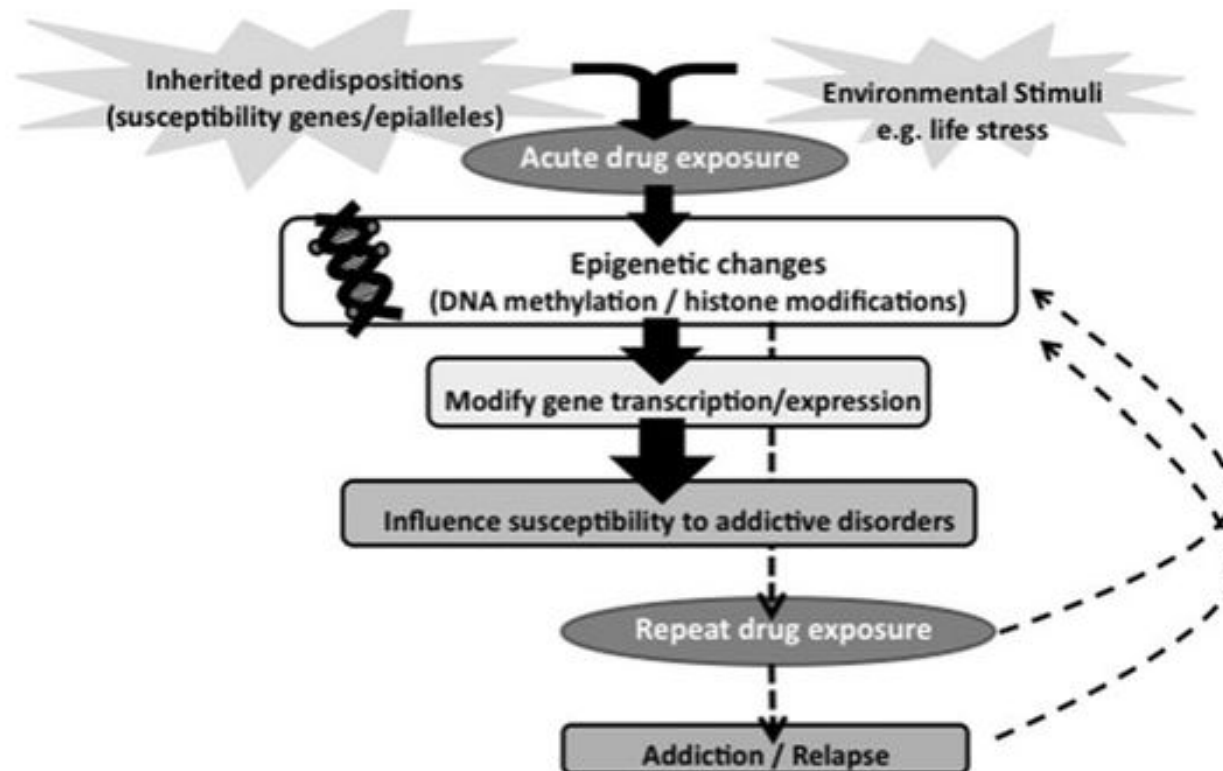

# Impact of Smoking on Health

## How is Genetics Important for your Health? (Lecture 2)

### ❖ ADDICTION INHERITANCE

- ❖ [Are Drug Addicts Born Susceptible? -Video \(3 mins\)](#)
- ❖ <https://www.youtube.com/watch?v=dvnJhtw15HA>

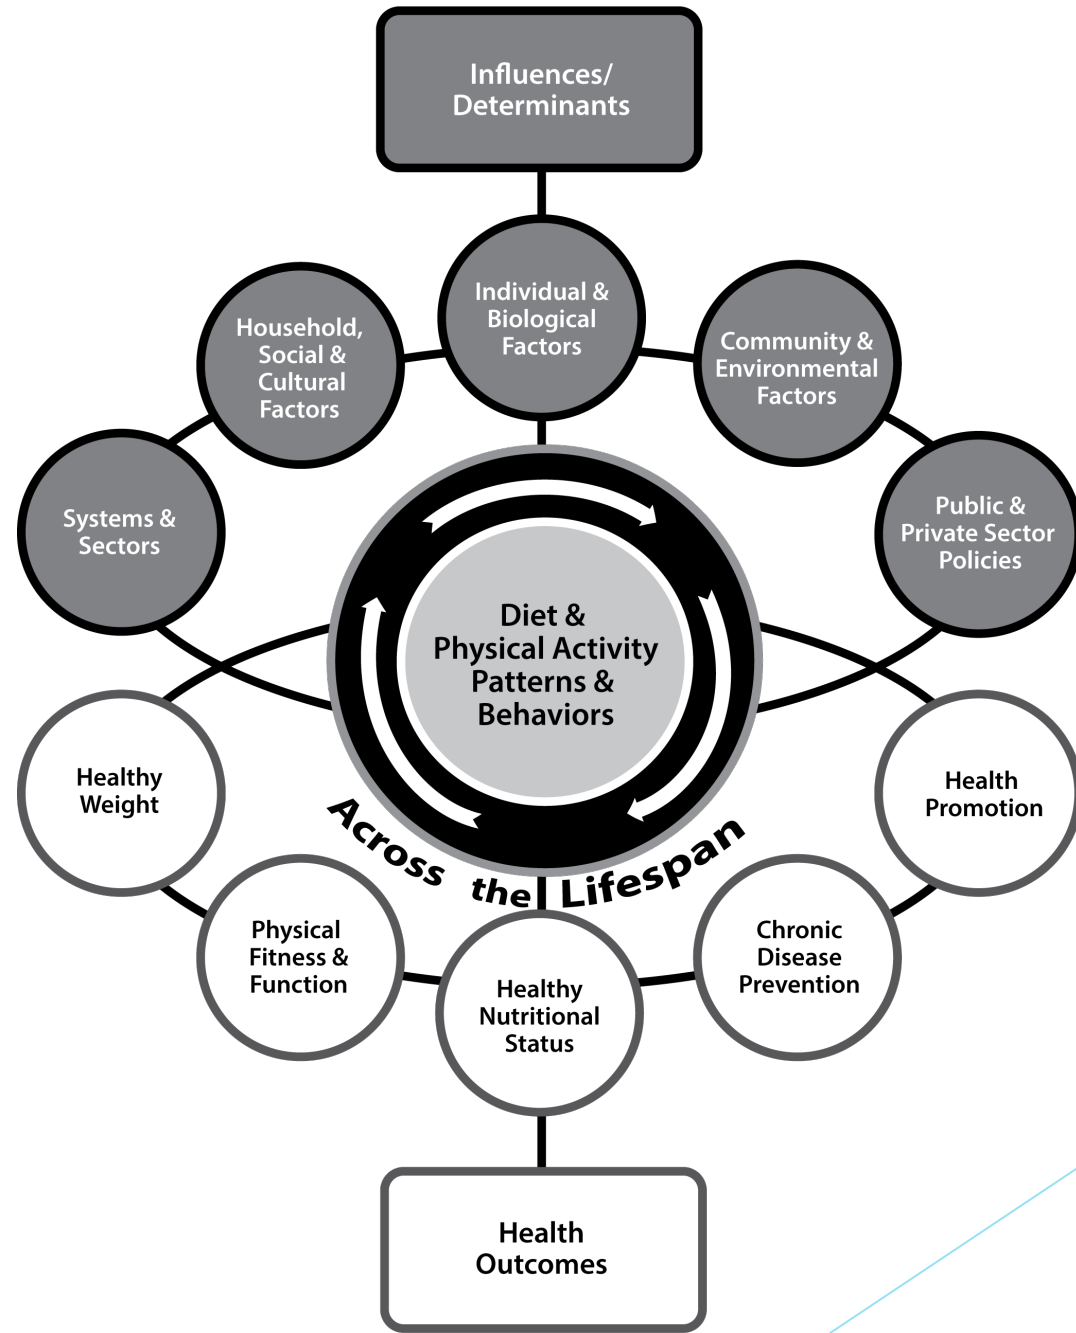

## How is Genetics Important for your Health? (Lecture 2)

- ❖ A healthy life involves all factors discussed (exercise, diet and lifestyle choices)
- ❖ Also requires a balance of nourishing aspects: physical, social, emotional, mental and spiritual engagements.

# Diet and Physical Activity, Health Promotion and Disease Prevention at Individual and Population Levels across the Lifespan

## ❖ SUMMARY

- ❖ Mutations can be beneficial for an organism, but can also cause changes that lead to abnormalities and disease
- ❖ Family history and formation of pedigrees allows for an analysis of possible risk factors
- ❖ Genetic, as well as environmental factors contribute to the alteration of genes and overall health
- ❖ Different forms of inheritance results in disease phenotype but sometimes traits are silenced in some generations (reiterates the importance of family history-taking)

# Upcoming Let's Talk Science MEDS Seminar

## **LIVE AND LET DIE: An explanation of physician- assisted suicide in Canada**

Let's talk science with med students at UVic

- What does the Supreme Court of Canada 2015 ruling say?
- Which other countries have a physician assisted suicide law?
- What does the current proposed legislation say?

Join first-year Island Medical Program students **Sergiy Shatenko, Samuel Harder** and **Andrew Watters** to learn the answers to these questions.

---

Tuesday, May 17 @ 7:00 pm  
Medical Sciences Building Room 150

Refreshments available | This is the latest in a series of medical student presentations
