PFQ-2 Dimension	NSIR Factor/Item Application	Hypothesis
Shame-Proneness	Factor: Social Comfort/Trust Safety	High shame will correlate with a preference for robots that are "consistent" (Item 8).
Guilt-Proneness	Factor: Anthropomorphic Connection	High guilt will correlate with higher "naming" (Item 6) and "kinship" (Item 1) behaviors.
Self-Consciousness	NSIR Item 2: "Sometimes I stare..."	Users with low social shame will feel more comfortable with prolonged gaze/staring at the robot.
Public Exposure	NSIR Item 7: Undressing comfort	Robots will provide higher comfort levels for high-shame users than human caregivers.
